Education

University of California, Irvine – Donald Bren School of Information and Computer Sciences

GPA: 3.83 / 4.00

Bachelor of Science in Computer Science

Class of 2025

- **Relevant Coursework:** Machine Learning, Artificial Intelligence, Quantum Computing, Information Retrieval, Data Management, Formal Languages & Automata, Data Structures & Algorithms, Computer Architecture, Boolean Algebra & Discrete Structures

Technical Skills

Languages: Python, Java, C++, C, SQL

Technologies: AWS, Docker, Kubernetes, JDBC, RESTful APIs, Apache Tomcat, Git, reCAPTCHA, Express, HTML, CSS

Professional Experience

Oracle

Redwood City, CA

Software Engineer I, OCI Virtual Cloud Network – Data Plane (VCN-DP)

July 2025 – Present

- Implemented NVMe storage access in a large-scale distributed cloud infrastructure, enabling high-throughput and low-latency block storage for cloud tenants
- Extended host interface configurations to support both physical and virtual adapters, improving resource isolation and workload density in a multi-tenant cloud environment
- Contributed to core cloud infrastructure affecting millions of Oracle Cloud customers

Software Engineer Intern, OCI Access Governance

June 2024 – September 2024

- Built organization-level access control features in OCI Access Governance, enabling fine-grained policy enforcement across enterprise customer hierarchies
- Developed event-driven campaign automation that reduced manual review overhead for identity governance workflows

University of California, Irvine

Irvine, CA

Discrete Mathematics and Boolean Algebra – Reader & Learning Assistant

September 2024 – June 2025

- Supported a course of 400+ students by holding office hours, clarifying concepts, and grading quizzes, midterms, and finals

SAP (Systems, Applications, and Products in Data Processing)

Palo Alto, CA

Software Engineer Intern, Tool Development

June 2023 – June 2024

- Automated test plan creation via JIRA Xray APIs to ingest XML files and generate structured test plans, eliminating manual entry and significantly reducing human error
- Led team-wide migration from EZMan, a legacy test management tool, to Xray by JIRA, improving search performance and reducing maintenance overhead across the QA organization
- Conducted technical training sessions with the engineering team on Xray's features: test registration, execution, status tracking, and reporting

Informatica

Redwood City, CA

Software Engineer Intern, Cloud Development

June 2022 – August 2022

- Implemented an automated cleanup mechanism to terminate stale tasks on agent startup, saving the DevOps team ~40 hours per month
- Exposed pod-to-pod migration batch size as a runtime configuration parameter, eliminating the need for full SaaS restarts and saving ~3 hours per pod failover
- Worked in an Agile/Scrum environment following 2-week sprints and participating in daily standups and sprint planning

Projects

Fabflix

April 2025 – June 2025

- Architected and built a full-stack web application from scratch on AWS with MySQL, Apache Tomcat, and Java servlets, supporting a 50,000-row movie database
- Implemented ~20 features including search and filtering across thousands of movies, secure session-based logins, shopping cart, and encrypted user information
- Containerized and deployed the application with Kubernetes spanning multiple AWS instances for horizontal scalability
